

BIBTEX bibliography style `chicago18ad.bst` for the Chicago author–date citation style

David Lamkin*

July 2, 2026

This document describes a new BIBTEX bibliography style file to assist L^AT_EX users with the preparation of a bibliography in author–date style according to the *Chicago Manual of Style*, 18th edition (University of Chicago Press 2024).

The style file builds upon and updates previous Chicago-style `.bst` files to produce a bibliography more-or-less in 18th edition Chicago author–date style, such that:

- it works with `natbib` 8.31b to produce `\bibitem` entries in the form `\bibitem[Jones et~al(1990)Jones, Baker, and Smith]{key}...`
- the number of authors’ (or editors’) names listed in the bibliography is reduced to a maximum of six, or truncated to three ‘et al.’ if there are any more
- DOI is used as first choice of online source for all items: the style file outputs the DOI if both `doi` and `url` are in the database entry, or outputs the URL (plus access date, if given) if there is no `doi`
- book entries can contain editors, translators and illustrators in addition to/instead of authors
- `@article` entries can contain an editor in place of an author, for citing a special issue or special section of a journal
- the non-standard entry types `@magazine`, `@newspaper`, `@periodical` and `@webpage` are recognised for compatibility with other bibliography styles

This document is a work in progress. As the style file itself evolves, this will eventually become a complete user guide with examples and discussion.

*Email: formatwithstyle@outlook.com

Setting up to use the style file

The `chicago18ad.bst` file is fully compatible with the `natbib`, `doi` and `hyperref` packages. I have found the preamble settings

```
\usepackage[sort]{natbib}
\bibpunct[, ]{({}{})}{;}{a}{}{,}

\usepackage{doi}
\usepackage{hyperref}
\renewcommand{\doitext}{https://doi.org/}
\urlstyle{same}
```

useful during development and testing.

New (non-standard) entry types

The `@magazine`, `@newspaper` and `@periodical` entry types

These are (currently) just synonyms for the `@article` entry type, recognised for compatibility with other bibliography styles such as `apacite` that use them. They all have the same required fields as an `@article`, with the added option of `editor` instead of `author` for citing a special issue or a special section. (With the current version of this bibliography style, the `@article` entry type suffices in the `BIBTEX` database, whatever type of periodical the article appears in.) The `@periodical` synonym, although non-standard, might make a good entry type to use when an entire issue, or even a section, e.g. a special issue of a journal, is cited, precisely because this is *not* referring to an individual article:

```
@periodical{Goo99,
  editor = {Good, Thomas L.},
  title = {Non-Subject-Matter Outcomes of Schooling},
  note = {Special issue},
  journal = {Elementary School J},
  volume = 99,
  number = 5,
  year = 1999
}
```

The `title` here is that of the issue, not of an article. The `@article` entry type would also work just as well for this purpose.

The `@webpage` entry type

This is (currently) just a synonym for the `@misc` entry type, and likewise has no required fields; both have the added option of `editor` instead of `author` for citing an item with an editor. The entry type is so named after that created by Norman Gray's `urlbst` package for compatibility.

New (non-standard) fields

The translator field

This is included so that `@book` and `@inbook` entries can contain a translator in addition to/instead of an author and/or editor, and `@incollection` entries can contain a translator as well as an author and an editor (although there will be some ambiguity in regard to whether the translator in an `@incollection` has translated the chapter being cited or the whole collection). For example:

```
@book{AdBe99,
  author = {Adorno, Theodor W. and Benjamin, Walter},
  title = {The Complete Correspondence, 1928--1940},
  publisher = {Harvard University Press},
  translator = {Walker, Nicholas},
  editor = {Lonitz, Henri},
  year = 1999
}
```

BIBTEX will not complain that you *can't use both author and editor fields* in a `@book` entry (because with `chicago18ad.bst`, you *can*), but will instead issue a warning that you have done so, in case this was inadvertent.

In order to output “secondary” editors and translators (as in the above example), the `author` field in the bibentry must be non-empty—so if such a book ever has an author that is not a person's name, it should be formatted as `author = {{...}}` rather than using a `key` (because the latter is too far down BIBTEX's pecking order for selecting what to use as the label).

You can also have a translator without an author, for example:

```
@book{Sil74,
  translator = {Silverstein, Theodore},
  year = 1974,
  title = {Sir {G}awain and the {G}reen {K}night},
  publisher = {University of Chicago Press}
}
```

The illustrator field

This is included so that `@book` and `@inbook` entries can contain an illustrator in addition to/instead of an editor and/or translator (for references where the illustrations represent a significant contribution to the publication).
